

Project Design Phase
Solution Architecture

Date	16-07-2025
Team ID	6
Project Name	Freelance Finder
Maximum Marks	

Solution Architecture:

The architecture for *Freelance Finder* is designed to enable **hyper-local freelancing**—connecting clients and freelancers within specific regions or industries. The platform incorporates smart skill-matching, localized job boards, and transparent workflows.

Key Features:

- **Region-based job discovery:** Freelancers view jobs in their city/state using geotag filtering.
- **Skill-driven smart matching:** AI suggests jobs based on previous gigs, ratings, and keyword tags.
- **Built-in chat & file sharing:** Enables real-time collaboration.
- **Integrated milestone payments:** Money is released only when each project phase is complete.
- **Dispute handling dashboard:** Moderators can review job/project reports and resolve them fairly.
- **🔗 Mobile-first responsive design:** Built to work seamlessly on all devices.
